

AMERICAN OFFICE PRODUCTS GREEN INITIATIVE

As a responsible steward of our planet's resources, American Office Products looks for ways to reduce, reuse and recycle within our facility. As a distribution company we monitor our trucks and the routes they travel each day, making sure that we effectively conserve fuel and control usage, thereby limiting pollution and saving precious resources. Our paper and plastic recycling program keeps these reusable items out of our landfills, and our use of recycled materials in packaging products for distribution to our customers completes the cycle.

American Office Products, in partnership with our vendors, continues to develop eco-friendly office supplies through our NatureSaver™ brand. Our Toner Cartridge recycling program is an effective means for our customers to keep printer cartridges out of the refuse stream. We have also implemented Managed Print Solution (MPS). Using this program it allows us to reduce unnecessary toner and paper usage in our facilities.

By working with vendors and our customers on protecting our environment we hope to provide a better world for future generations Environmental Sustainability.

American Office Products aims to reduce our carbon footprint and increase sustainability. To achieve our mission, we encourage all businesses and customers to promote economic progress, and advocate for social and environmental responsibility. We also invite you to take part in our "go green" initiative and utilize our environmentally-friendly products.
